Not illustrated. 1919 Excerpt: .This seems necessary to account for the line spectra of substances containing more than one electron per atom. Further there may be stationary configurations of a system of n electrons and a nucleus of charge E in which all the electrons are not arranged in a single ring. As regards the stability of a ring of electrons, two problems arise. First as regards the stability for displacement of the electrons in the plane of the ring, and secondly, as regards displacements perpendicular to this plane. Nicholson has shown that the question of stability is very different in the two cases. While the ring for the latter displacements (displacements perpendicular to the ring) is in general stable, the ring is in no case stable for displacements in the plane of the ring. This conclusion is based upon classical electro-dynamics, and Bohr avoids the difficulty by making use...
