

The Radiant Properties of the Earth from the Standpoint of Atmospheric Thermodynamics (Paperback)

Filesize: 5.24 MB

Reviews

*An exceptional publication and also the typeface applied was fascinating to learn. It normally will not expense excessive. Your life period will be transform once you comprehensive looking over this pdf.
(Rachelle O'Connell)*

THE RADIANT PROPERTIES OF THE EARTH FROM THE STANDPOINT OF ATMOSPHERIC THERMODYNAMICS (PAPERBACK)

DOWNLOAD

To get **The Radiant Properties of the Earth from the Standpoint of Atmospheric Thermodynamics (Paperback)** PDF, please access the web link below and download the document or gain access to additional information which might be have conjunction with THE RADIANT PROPERTIES OF THE EARTH FROM THE STANDPOINT OF ATMOSPHERIC THERMODYNAMICS (PAPERBACK) ebook.

Theclassics.us, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1919 edition. Excerpt: . The fourth term involves Q which relates to thermal energy imported from without. If $Q_1 - Q_0$ represent the transference of thermal energy without any restriction, its dimension will be that of energy, $[ML^2/T^2]$. In order to harmonize with the other terms of the equation, $Q - Q_0$ must represent a quantity of thermal energy per unit mass, that is, the dimensional equation requires that M shall be taken out, so that the last term shall have the same dimension as the others. An example from the mean results for the European ascensions will show the meaning of the terms and their relation. The differential terms relate to the layer immediately below the given altitude. Take the height, $z = 10,000$ m., for which $\theta = 226$.o Abs. C. In the next 1000 meters below this altitude, the temperature gradient is $\Delta T = - 6$.8. Since the adiabatic gradient is $- 9$. 87 per 1000 m., there has been supplied in the layer between 9 and 10 km., either by absorption of radiation, or by transference of warm air by convection or circulation from neighboring warmer masses, or by molecular penetration from such masses, an amount of thermal energy sufficient to raise the air temperature 3 .07 above the temperature which it would have if no heat were allowed to enter or escape from the layer. This, apportioned equally throughout the entire vertical column of 1000 m. height and...
