Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1869 Excerpt: .from the iridium, and resembles a mass of ordinary coke. Ruthenium is the only one of these extremely rare metals which is shown in small quantity, being represented by a few masses about the size of peas. In the series of metals cast in rods, weighing one kilogram each, for the purpose of showing their bulk relatively to their weight, the metals which oxidize rapidly on exposure to the air, and quicksilver, which is fluid at ordinary temperatures, are confined in glass tubes. These tubes have the same internal diameter as all the rods of the series--about one inch. The platinum cylinder is about four inches long; the quicksilver about seven inches; and the others elongate by a very regular gradation up to the metal aluminium, which towers two feet above the metal which precedes it, and is in its turn overtopped by the rod of...
